

Acapulco Salmon and Pink Hyssop *Agastache mexicana 'Acapulco Salmon and Pink'*

Height: 24 inches

Spread: 12 inches

Sunlight: ☉

Hardiness Zone: (annual)

Other Names: Hummingbird Mint

Description:

This variety produces airy, fragrant spikes of pink and orange flowers; strong, upright form is great in borders and containers; for the best performance plant in fertile, well-drained soil in full sun

Ornamental Features

Acapulco Salmon and Pink Hyssop features airy spikes of lightly-scented pink tubular flowers with orange overtones rising above the foliage from mid summer to early fall. The flowers are excellent for cutting. Its attractive fragrant narrow leaves remain grayish green in color throughout the season. The fruit is not ornamentally significant.

Landscape Attributes

Acapulco Salmon and Pink Hyssop is an open herbaceous annual with an upright spreading habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees, butterflies and hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Acapulco Salmon and Pink Hyssop is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Naturalizing And Woodland Gardens
- Herb Gardens
- Container Planting

Planting & Growing

Acapulco Salmon and Pink Hyssop will grow to be about 20 inches tall at maturity, with a spread of 12 inches. Although it's not a true annual, this fast-growing plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is particular about its soil conditions, with a strong preference for rich, alkaline soils, and is able to handle environmental salt. It is somewhat tolerant of urban pollution. This is a selection of a native North American species. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Acapulco Salmon and Pink Hyssop is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
